

# GPS Monohunt

Played within a 1km - 800m radius

Players start at the middle of the radius and one person is the first hunter

The aim of the hunter is to find and "catch" the runners. If they get within 10m based on their GPS Location. However this can only be done when the accuracy is high ~~and~~ i.e. if they are under 30 - 40 meters of accuracy then the player will be caught and then they join the chosen team

The winner is the last runner standing. If the game lasts longer than 30 mins then all the remaining runners win the game.

If you leave the area you have 30 seconds to return
