

# GPS Shadow Tag

Everyone starts in a ~~100~~ 10 meter radius. Each player will get a deduction that is equivalent to the ~~circle~~

This would be 800 - 1000 meters away from the ~~target~~ <sup>start</sup>

One person will be the runner. Everyone else will be the chaser

~~The person will be able~~ The chaser will have a line feed of the ~~user~~ location ~~if~~ if the accuracy is under 30-40 meters of accuracy. Therefore the user is encouraged to go to GPS shadows to plan there next move.

~~However~~ If a chaser catches the runner then a new runner is created.

The user is ~~however~~ gets to the to there location in the ~~the~~ limit or is the ~~to~~ closest after half an hour

This is heavily inspired by Tet Log the Game S3
