

GPS Shadow Tag

Everyone starts in a ~~100~~ 10 meter radius. Each player will get a deduction that is equivalent to the ~~circle~~

This would be 800 - 1000 meters away from the ~~target~~ ^{start}

One person will be the runner. Everyone else will be the chaser

~~The person will be able~~ The chaser will have a line feed of the ~~user's~~ location ~~if~~ if the accuracy is under 30-40 meters of accuracy. Therefore the user is encouraged to go to GPS shadows to plan their next move.

~~However~~ If a chaser catches the runner then a new runner is created.

The runner is ~~chaser~~ gets to the to their location in the time limit or is the closest after half an hour

This is heavily inspired by Tet Log the Game S3
